

COMMENTS-

It is defined as this `//` and it is used for commenting something in the program and it does not effect the program .

Some key points

->We use this for recall easily whatever we have written in program

->Why this added what was the use of that code in the line

There are three types of comments are there-

1 Single line comments

- this is the most simple comments which is done in single line `//here some is happening`

2 Multiline comments

- `/*ABC
DEF
*/`

3 Documentation Comments

- it can comment the whole java code

```
/**  
ABC  
DEF  
*/
```

Access Modifier-

->Private->Protected>Public->Default

~Private modifier in which is only used ny single person

~Protected is used by more then ones but not by many they have some privacy there

~Public is a modifier in which it can use by anyb one

Hello world(First program)

```
class HelloWorld {  
    public static void main(String[] args) {  
        System.out.println("Hello, World!");  
    }  
}
```

Some key Points

-> Javac <file name>.java

java< file name>

They are used to run the java code in cmd

-> print and println both of them are different, what print does is that it prints the output in the same line but in case of println it changes the line of the output which is good for better understanding.
